

Gli LLM sono “intelligenti”?

- 20 modelli “importanti” di Mistral, Google, Meta, OpenAI, Microsoft testati su variazioni di semplici problemi matematici di scuola elementare.
- i modelli sono fragili: le loro prestazioni variano e diminuiscono notevolmente sia cambiando i numeri nei problemi che aggiungendo informazioni irrilevanti.

GSM-Symbolic: Understanding the Limitations of Mathematical Reasoning in Large Language Models

Abstract

Recent advancements in Large Language Models (LLMs) have sparked interest in their formal reasoning capabilities, particularly in mathematics. The GSM8K benchmark is widely used to assess the mathematical reasoning of models on grade-school-level questions. While the performance of LLMs on GSM8K has significantly improved in recent years, it remains unclear whether their mathematical reasoning capabilities have genuinely advanced, raising questions about the reliability of the reported metrics. To address these concerns, we conduct a large-scale study on several state-of-the-art open and closed models. To overcome the limitations of
